The insidious accumulation of risk over time can lead to poor long-term outcomes; we know that the interrelationships between risk factors for graft survival, due to the complexity of the transplanted graft, are complicated. Br Med J ; 1: Adoptive transfer of genetically modified human hematopoietic stem cells into preimmune canine fetuses.

The titles should be at least 4 characters long. It will be interesting to assess if the improvements in long-term graft and patient survival with prolonged-release versus immediate-release tacrolimus that have been reported in liver transplantation 18 are also apparent in kidney transplantation. Furthermore, even in the presence of injury, immune complexes and activated complement are phagocytized by Kupffer cells.

Identification of pre-leukaemic haematopoietic stem cells in acute leukaemia: authors declare that the research was conducted in the absence of any commercial or financial relationships that could be construed as a potential conflict of interest.
