Click on the following topics for more information on plant nutrition of greenhouse crops. Greenhouse cultivation is noted for its high uptake of minerals, consistent climatic conditions, exclusion of natural precipitation and control of salt accumulation. Maintaining adequate nutrition is among the most critical aspects of producing greenhouse crops.

ReadthisbookonSpringerLink.GreenhouseGlazing. Save to Library. Review Text From the reviews: "This book is a comprehensive, detailed treatise on fertilisation and nutrient relationships in growing media and hydroponics. Fertilizers and soil improvers; 3.

This especially holds when the crops are grown in substrates. When the salinity passes certain threshold values, the growth and production of crops is reduced, but the quality of the harvested produce of some crops is improved.
